Linkedin Profile Telegram Channel Contributing to the field since 2017

Github Account Born 29st July 1993

Personal Summary

AI is where I feel most at home, honestly. Every new development sparks my curiosity and drives me to keep pushing boundaries. I genuinely enjoy creating solutions that balance on the edge of what's possible—always looking for that next innovative leap. Working with data isn't just part of the job for me; it's where I find real value, turning raw information into actionable insights that help guide smart decisions. I'm eager to join a forward-thinking team that's not afraid to embrace change, pursue ambitious goals, and keep growing together.

WORK EXPERIENCE

2026– Present (4 Month)

Kasbi, *Corporate Mobility & Managed Transportation Platform, Tehran, Iran*

Senior Data Scientist (Dynamic Pricing)

Designed and productionized Kasbi's dynamic pricing system, first modeling competitor pricing behavior and then developing an independent pricing methodology based on trip duration, traffic, location, city, time, and stop characteristics. Built market-calibration mechanisms to continuously adapt prices to changing conditions while maintaining business and operational constraints.

Owned the end-to-end ML pipeline from data preparation and modeling to API deployment, database integration, containerization, experiment tracking, and monitoring using Python, PostgreSQL/SQL Server, FastAPI, Docker, MLflow, Grafana, and Prometheus. Also developed Plotly/Streamlit executive dashboards to support pricing, product, and management decisions.

2025–2026 (1 Year 1 Month)

Khanoumi, *Largest Iranian e-commerce in cosmetics, personal care and perfumes, Tehran, Iran*

Senior Data Scientist (Dynamic Pricing)

Khanoumi is a leading online beauty personal-care retailer in Iran. There, I designed and deployed a dynamic pricing project: an engine that learns price–demand behavior, respects brand/category discount guardrails and cost floors, and auto-recommends daily prices aligned to NMV and margin targets. It integrates with campaign planning so themed "deal of the day" promos receive price sets that are commercially sound and operationally simple.

On the days the algorithm drove pricing, it delivered consistent uplifts versus plan: on average it increased AOV by 0.7%, lifted NMV versus target by 3.2%, and raised order volume versus target by 1.2%. In short, the system translated pricing science into measurable growth on campaign days.

2021–2025 (3 Years 9 Month)

Securities and Exchange Organization of Iran

Senior Machine Learning Engineer (NLP, Time Series)

Trained an anomaly-detection model on order-flow features to flag suspect behaviors (e.g., sudden depth imbalances, spoof-like bursts). The output fed the live dashboard and alerts channel to prioritize human review. (Model specifics and code are internal; high-level design available on request.)

Designed a Persian-language social feed monitor that collects finance hashtags, cleans text (Hazm), links mentions to listed symbols, and summarizes sentiment/velocity. A lightweight RAG subsystem retrieves recent posts and internal symbol facts to answer "why is X moving?" style queries, improving analyst triage with source-backed snippets instead of raw noise.

Built a real-time monitoring stack and dashboard that ingests TSETMC/TGJU/Investing.com plus internal feeds and surfaces high-signal indicators (TEPIX, IFB, flows, YTM, FX/crypto/commodities) in one view. The pipeline refreshes core metrics every 15–60s and maintains 30+ time series with automatic rollups, replacing a patchwork of tools with a single operational screen.

2020–2023 (3 Years) ***Nemad Bin Bot,*** Sharif University of Technology, Tehran, Iran

Machine Learning Engineer (NLP), Founder & Full-Stack Developer

Developed solutions for converting Persian language requests into insightful visualizations (NLP –> SQL Query –> Python Code –> Visualization), implemented innovative software architectures for scalable system performance and avoid single point of failure, engineered a high-performance MySQL database for intensive read-write operations, built a high-speed web crawler for efficient data extraction, analyzed user activity logs to perform usability tests, and led team efforts that attracted over 10,000 monthly-active users to the platform.

2017–2021 (3 Years 7 Mon) ***Taha Startup Studio,*** Sharif University of Technology, Tehran, Iran

Machine Learning Engineer (NLP, Image Processing)

Developed fundamental NLP tools in Persian and English, led a team to create a Persian sentiment analysis dataset of over 43,000 sentences with five-class tags, and served as the sentiment analysis dataset. — Developed a video game-playing agent by preprocessing input images, applying on a CNN architecture, optimizing hyperparameters, applying data augmentation, and enhancing model performance.

2016–2017 (1 Years 3 Mon) ***Sibe Sorkh,*** MCS Department, Allameh Tabataei University, Tehran, Iran

Machine Learning Engineer (NLP), Co-founder

Developed and trained a text classification model to distinguish whether the given ads belongs to homeowner or a real estate agent. Develop a pipeline to Crawl, Clean, and Analyze Data From Web (more than 10.000 rows was been saved every day)

2012–2015 (3 Years 5 Mon) ***Amin Intelliware,*** Tehran, Iran

Game Developer

Video game developer, Augmented Reality developer

Research Experiences

Springer ***Uber's Contribution to Faster Deep Learning, A Case Study in Distributed Model Training***
A Chapter in the Book: *Advances in Data Clustering: Theory and Applications*
Publisher: *Springer*
Author: *Hamid Mahmoodabadi* [Link to Chapter Draft] [Link to Amazon]

Under ACL Rolling Review ***PSA43K: A Fine-Grained Persian Sentiment Analysis Dataset***
First Author: *Hamid Mahmoodabadi*[Link to Preprint]
Co-Author(s): *Leila Afsar*
Supervisor: *Ahmed M. Abdelmoniem, Queen Mary University of London*

2017(July) ***Evaluation the Effect of the Dimension Reduction on the Performance of Linear and Non-linear Classifiers***
The Second Annual Conference on Applied Research in Computer and IT Engineering
First Author: *Hamid Mahmoodabadi*[Link to Paper]
Supervisor: *Mohammadreza A. Oskoei, University of Essex*

2023(July) ***Glossary of Data Science and Machine Learning Terms***
Github Repository
Author: *Hamid Mahmoodabadi*[Link to Repository]

2019 – 2019 (6 Mon) Research in Finance

Machine Learning Research Engineer | ***Department of Economics and Management, Sharif University of Technology, Tehran, Iran***

- Creating a Model to Predict Time Series Data for 10 stock market shares
- *Tools: Pytorch + Numpy + RNN(Recursive NN)*

EDUCATION

2016 – 2018 MSc: Computer Science - **Artificial Intelligence**

MSC Department | Allameh Tabataei University, Tehran, Iran

- GPA: 16.5/20
- Thesis: *Sentence-based Sentiment Analysis using Deep Recursive Tensor Neural Networks approach (Supervisor: Dr. Farzad Eskandari). [Link to PDF]*

2012 – 2014 BSc: **Computer Software Engineering**

Computer Engineering Department

- GPA: 16.6/20
- Final project: *Designing and Implementing Online Shopping Website from Scratch (Supervisor: Dr. Amin Ghazizahedi).*

Language Proficiency

English (TOEFL iBT Score: 100)

Persian *Native*

Azeri *Professional*
